

4XEM 2-to-1 RJ45 Splitter Cable Adapter - F/M- CAT5E. Used separately

4XEM Part- 4XCAT5ESPLITTER

4XEM's 2-to-1 splitter cable is an ideal device to increase the number of RJ-45 network connections on an RJ-45 outlet. This allows for two Ethernet signals to go through a single CAT5E wire. A technical product, this splitter is designed to greatly increase your Ethernet installations. On one end of the installation this splitter can connect two patch cables from a hub to a single patch panel. It is important to note that this product is not designed to connect one single Ethernet connection to two separate computers/devices—you would need to use a hub connection for that.

Problem it Solves: Enhance your Ethernet installation with 4XEM's 2-to-1 RJ-45 Splitter cable adapter.
